

ViroGates announces a current total of 33 clinical routine hospital customers and adjusts its disclosure policy

BIRKERØD, DENMARK – ViroGates A/S, a medical technology company developing blood tests for better triaging in hospitals to improve patient care and reduce healthcare costs, today announces a current total of 33 clinical routine hospital customers in nine markets.

During the creation of the Q1 2022 report, ViroGates' sales representatives and distributors have reported a combined current total of 33 clinical routine hospital customers across nine markets. The number of routine customers is a significant increase from the +15 customers across six markets reported as of 31 December 2021 in the Annual Report of 2021. The primary reason for the rise is an increased awareness and interest in suPARnostic® following the EMA approval of suPAR-guided anakinra treatment in COVID-19 patients in December 2021.

The 33 customers are hospitals that have placed two or more orders of suPARnostic® products for clinical routine use in the last 12 months.

In the future, ViroGates will not make company announcements about small- to medium-sized individual hospital accounts because a single account is no longer considered insider information that can affect the share price, given the more extensive customer base. Future substantial individual accounts may still be considered insider information and will be announced individually.

To ensure transparency regarding customer development, ViroGates will report on the number of customers in more detail in future interim and annual reports.

Jakob Knudsen, CEO of ViroGates, says: *"We are delighted to see the rapid onboarding of many new hospitals across our key markets in the past few months. The new hospitals primarily use suPARnostic® for COVID-19 patients to assess the severity and prognosis of the disease. We do, however, also start to see the first hospitals transitioning from using suPARnostic® in COVID-19 to general emergency department triaging once they experience the value of suPAR as a biomarker. This transition is a focus area for us going forward."*

About ViroGates

ViroGates A/S is an international medical technology company developing and marketing blood test products under the suPARnostic® brand for better triaging in hospitals to improve patient care, reduce healthcare costs and empower clinical staff.

The company was founded in 2000. Headquartered in Denmark, ViroGates' sales force covers the Nordics, Spain, France and Benelux, while distributors serve other markets.

ViroGates' shares (VIRO) are listed on Nasdaq First North Growth Market Denmark. For more information, visit www.virogates.com.

About suPAR and suPARnostic®

suPAR is a biomarker detected by ViroGates' suPARnostic® products. It is a protein found in the plasma. suPAR is considered a general risk status biomarker indicating inflammation and can indicate disease presence, severity, and progression across disease areas such as cardiovascular diseases, kidney diseases, type 2 diabetes, cancer, etc. Strong scientific evidence from more than 800 clinical trials and studies shows that the higher the level of suPAR, the worse the prognosis for the patient.

The suPARnostic® products can be used to support healthcare professionals in making clinical decisions on hospitalization or discharge of acute care patients. The increasing global demands on health systems and tightening healthcare budgets necessitate efficiency improvements and innovative hospital solutions. The use of suPAR in clinical routine in emergency departments can improve patient care and reduce healthcare costs by increasing the number of discharges by up to 34% and reducing the average hospital length of stay by up to 6% without affecting mortality. suPARnostic® TurbiLatex is currently available on Roche Diagnostics' cobas® instruments, Siemens Healthineers ADVIA® XPT and Atellica® instruments and the Abbott Labs Architect™ and Alinity™ instruments. ViroGates works with partners to develop solutions for other platforms.
