

Monsenso releases an enhanced version of its clinical web portal and patient app

1.12.2022 16:30:05 CET | Monsenso | Investor News

Monsenso enhances its digital health solution to improve its support of treatment and clinical trials in mental health and chronic disorders.

The product enhancements entail an improved and even more intuitive user interface of the solution's patient app and clinical web portal in order to enhance remote patient monitoring and treatment support for clinicians, as well as the communication and collaboration between clinician and patient.

Among others, the enhancements allow clinicians to recommend treatment content to the patients individually to support personalised treatment. Clinicians can now recommend their patients to do specific exercises, visit the library with psychoeducational content or answer a specific clinical questionnaire. Once the clinician has made a recommendation via the clinical web portal, patients are notified and it is immediately emphasised in the patient's app. This allows clinicians to provide more personalised treatment and also helps engage and empower patients in taking care of their own mental health.

The product enhancements result from an extensive, user-centered design process involving patients and clinicians in both design and testing phases to ensure the enhancements meet the needs of our users.

"We are excited to offer an improved version of our digital health solution to partners, clients, and patients. The feedback we have received during extensive internal and external testing periods has been excellent, and we are looking forward to empowering individuals, their carers, and clinicians even more", says CEO, Thomas Lethenborg.

About Monsenso

Monsenso er en innovativ virksomhed, som tilbyder en digital sundhedsløsning til brug for decentraliserede forsøg, patientmonitorering og behandlingsunderstøttelse. Vores mission er at bidrage til bedre sundhed til flere personer og lavere omkostninger ved at understøtte behandling og kliniske forsøg digitalt og bedre udnytte patienters egne data. Vores løsning bidrager til optimering af både behandlingen og kliniske forsøg og giver et detaljeret overblik over patienters sundhed via indsamling af data om deres tilstand, adhærens og adfærd. Løsningen forbinder patienter, omsorgspersoner og behandlere for at muliggøre digital understøttelse af personligt tilpasset behandling og effektive decentraliserede kliniske forsøg. Vi samarbejder med sundhedsvæsenet, medicinalindustrien og forskningsinstitutioner verden over i vores forsøg på at levere løsninger som passer ind i patienters og sundhedsprofessionelles hverdag.
