Company Announcement No. 57 - inside information

Seluxit has developed a solution, Wappsto:bit, which can be used for teaching Internet of Things, data science, programming and electronics in schools. In connection with a tender for the Spanish region of Catalonia, Seluxit has now received a significant order of over DKK 600,000 for delivery in November 2023.

CEO Daniel Lux:

"Our Educational Technology (Ed-Tech) product Wappsto:bit has moved our technology significantly forward. The goal was to make our solution so easy to use that children at the age of 8 and above could easily connect a sensor and see data within 10 minutes. It is especially the usability of our product that has been decisive for the region of Catalonia when they chose our solution. My hope is that the significant number of devices will increase interest in our solution and result in further orders for other Spanish regions and subscriptions to our platform Wappsto."

About Seluxit

Seluxit connects things to the internet to optimize systems, save resources and save money. That makes sense for the economy, for the environment and for society.

Seluxit's unique standards-based approach to IoT reduces development time and development costs, and thereby minimizes risks. That gives our customers a fast path to both saving and earning money, because their solution enters the market quickly.

Our end-to-end IoT solutions create value in many ways including optimizing energy usage, improving service efficiency, and allowing for more effective training.
