

## Seluxit's EdTech products for Education (Educational Technology) in growth

14.2.2024 13:10:07 CET | Seluxit | Investor News

Seluxit supplies educational technology to Danish schools and a Spanish competence development project for teachers

Seluxit has sold educational technology products and the cloud solution Wappsto to two Danish private schools in Aalborg and Aarhus. Skipper Clement Skolen and Leonardo Skolen want to focus on understanding technology and technological education so students gain an interest in and understanding of technology, energy and programming.

Seluxit and VIA CFU (Center for Teaching Aids) Midtjylland have entered into an agreement to test Seluxit's new solution for teaching students about energy and energy efficiency. The test will be conducted in the spring of 2024 in 8th and 10th grades.

The Universitat Rovira in Virgili in Spain has chosen to use Seluxit's Wappsto:bits and Wappsto in a project for the competence development of 100 teachers. The teachers must use Seluxit's products to gain skills in data analysis, IoT, technology and programming. The teachers obtain an accreditation for the course.

Our training and energy efficiency solutions are currently experiencing great interest in Denmark and abroad. At Mobile World Congress 2024, which will take place at the end of February, we expect further sales, participation in relevant projects, and entry into strategic partnerships.

CEO Daniel Lux:

"We are very pleased to experience an increasing demand for technological solutions from the world of education. We see the coming generations playing an important role in technical development and the green transition, which is why it is important to equip them with skills early on and, at the same time, inspire them to become interested in technology and digitisation. We are proud to be part of such an important agenda."

### **About Seluxit**

Seluxit connects things to the internet to optimize systems, save resources and save money.

That makes sense for the economy, for the environment and for society.

Seluxit's unique standards-based approach to IoT reduces development time and development costs, and thereby minimizes risks. That gives our customers a fast path to both saving and earning money, because their solution enters the

market quickly.

Our end-to-end IoT solutions create value in many ways including optimizing energy usage, improving service efficiency, and allowing for more effective training.
