

## Seluxit receives an order for development services

14.5.2024 12:46:39 CEST | Seluxit | Investor News

Seluxit to help North Jutland company with technical development

Seluxit has sold development assistance in the form of consulting services to a North Jutland manufacturing company within industrial and professional lifting/lowering solutions.

Due to Seluxit's technical skills in hardware and software, the company has chosen Seluxit to help further develop and optimise its software control platform, user interface, and programming.

The development is expected to improve product management, optimise service process handling, and facilitate configuration and product customisation.

In addition to the development task, Seluxit will also be responsible for testing the solution in production.

The order size is DKK 250k and is expected to be delivered over the next 2-3 months.

CEO Daniel Lux:

"The order falls under our IoT area and has been coming for a long time. We are happy that we can apply our many years of experience and technical skills to help local companies take technical steps that improve products and solutions. Ultimately, this helps with resource savings, which is always on our minds."

### **About Seluxit**

Seluxit connects things to the internet to optimize systems, save resources and save money.

That makes sense for the economy, for the environment and for society.

Seluxit's unique standards-based approach to IoT reduces development time and development costs, and thereby minimizes risks. That gives our customers a fast path to both saving and earning money, because their solution enters the market quickly.

Our end-to-end IoT solutions create value in many ways including optimizing energy usage, improving service efficiency, and allowing for more effective training.
