German municipality buys software solution

26.8.2025 15:24:36 CEST | Dataproces Group A/S | Investor News

Investor news no. 34/2025: Municipality in northern Germany becomes seventh on Boelplan solution

In investor news no. 13 from April 2nd 2025, we announced that Dataproces Group A/S had acquired Boelplan A/S. In addition to a number of Danish municipalities, the acquisition also resulted in Dataproces taking over the existing agreements with six German municipalities on Boelplan's solution for population forecasting and capacity planning.

A municipality in northern Germany will now be the seventh municipality on the solution.

"The agreement is the first contract that has fallen into place after our acquisition of Boelplan, so it is of course a great pleasure that Dataproces has now been able to penetrate a new market with a huge potential," says CEO Michael Binderup.

"So far, the Boelplan solution is still running in Germany. But in the beginning of 2026, we expect to be ready with a new and more modern solution, based on the Dataproces platform KØS. After this, the plan is to intensify the sales efforts in Germany," adds Michael Binderup.

General about contract announcements as investor news:

All announced contracts are in accordance with Dataproces' strategic focus and do not change the announced guidance. As the SaaS platforms MARS, MARC, KØS and KommuneProfilen are central to the guided business strategy, each time a contract is entered into with a new municipality (borth in Denmark and Germany) - as well as an agreement on the expansion of delivery within one of the areas to an already existing customer, if the annual turnover from there is expected to exceed DKK 100,000. Furthermore, an agreement is entered into on the delivery of a Data Analysis assignment where the expected fee is greater than DKK 250,000. Similarly, if agreements are entered into for delivery to a new customer in a new customer group, where the expected fee is greater than DKK 250,000.

In announcements regarding danish municipalities, Dataproces distinguishes between three categories of municipality size; The 50 smallest municipalities are referred to as municipalities, the 38 middle municipalities are referred to as larger municipalities and the 10 largest are referred to as top-10 municipalities.

So far, municipalities in Germany are only referred to as "a municipality", regardless of size
